Artemis Bolsters Leadership Team with Polymer Testing Veteran Andrew Lineker (Andy)

Artemis Test Instruments has announced the appointment of Andrew Lineker as Head of Global products, bringing nearly four decades of specialised industry experience to the Worcester-based polymer and plastics testing equipment manufacturer.

Starting his career straight from school, Andrew has spent nearly 40 years mastering every facet of the polymer testing sector. His extensive background spans hands-on roles on the production floor through to senior operational and executive leadership positions, granting him a comprehensive, ground-up understanding of testing apparatus engineering and manufacturing.

Widely regarded across the industry as an oracle of knowledge for testing instrumentation, Andy's deep technical expertise encompasses mechanical design, electronic control systems, and precision calibration standards. His addition to the leadership roster aligns directly with Artemis's growth strategy, reinforcing the company's commitment to in-house research, development, and advanced engineering, manufacturing and business development.

Managing Director Tamzin Richardson noted that Andy's appointment marks a pivotal milestone for the brand. With nearly forty years of specialised insight guiding the engineering department, Artemis is uniquely positioned to accelerate product development, expand its catalog of advanced testing instruments, and scale its international operations faster than ever before.

Expanding Our Reach: Artemis Instruments Partners with AML Instruments

We are excited to announce our official distribution partnership with AML Instruments, a trusted leader in industrial instrumentation, calibration, and technical support. This collaboration brings together our precision-engineered polymer and materials testing equipment with AML's stellar reputation for industry expertise and customer service.

For our clients across the plastics, packaging, automotive, and manufacturing sectors, this partnership means streamlined, local access to our gold-standard testing portfolio. Whether you are looking for advanced melt flow indexers, impact testers, or specialized thermal testing apparatus, you can now secure our complete range alongside AML's comprehensive calibration and after-sales maintenance services.

By joining forces with AML Instruments, we are ensuring that laboratories and manufacturers receive a seamless, end-to-end support experience—from factory-compliant procurement to long-term equipment servicing. Reach out to the AML team today to explore our latest testing solutions and discover how this partnership can elevate your quality control operations. **Contact AML on Tel: +4401522 789375 Email: sales@amlinstruments.co.uk**

Following in the footsteps of giants!

Artemis Proudly Sponsors Rising Star Sam Richardson-Hall in UK National Club100

Artemis is proud to announce its official sponsorship of Sam Richardson-Hall, a talented young driver making waves in his debut season of the UK National Club100 go-karting championship. Following a dominant championship-winning run at the local level, Sam has advanced to national competition, currently holding 10th place out of 52 drivers and positioning himself strongly for a middle top-ten finish in his rookie season.

Like many motorsport legends before him—including Ayrton Senna and Lewis Hamilton—Sam's journey begins at the grassroots level of karting.

The partnership between Sam and Artemis is a natural alignment of values. Achieving success at the highest levels of motorsport demands absolute precision across every discipline: engineering, mechanics, and electronics, combined with an unwavering eye for detail both on and off the track.

At Artemis, we strive for that exact same level of perfection in every instrument we build. This dedication ensures our customers have absolute confidence that their investment in Artemis test equipment is an investment in uncompromising quality and reliability.

Season Finale at Silverstone

On November 7th, Sam will compete in the final race of the season at the world-class Silverstone circuit in the UK. Fully prepared and dedicated to reaching peak physical and mental form, Sam heads into this crucial event with intense focus. We extend our best wishes to Sam for a fast, safe, and successful race day.

Meeting the Challenge: Artemis Delivers Urgent ASTM D1895 Testing Equipment to the United States

When time is of the essence and operational deadlines loom, industrial manufacturers need a partner they can trust to deliver without cutting corners. Recently, Artemis Instruments faced one of such defining moments when an American customer approached us with a critically urgent requirement: they needed a Bulk Density ASTM D1895 Method B instrument delivered and in their hands by the 14th of September. With a timeframe that was exceptionally tight, the customer turned to Artemis specifically because of our reputation for rapid response and reliable turnaround times.

Precision Meets Pace

Adhering to strict delivery schedules is standard practice at Artemis, but hitting a compressed deadline requires seamless coordination across design, manufacturing, and logistics—all without ever compromising on quality. The ASTM D1895 Method B test apparatus is vital for accurately determining the apparent density, bulk factor, and pourability of plastic materials and molding powders. Ensuring this equipment meets rigorous industry standards leaves no room for rushed workmanship or overlooked details.

Although the order consisted of just a single bulk density tester, our philosophy remains absolute: we treat every order with the exact same level of care, dedication, and priority. Whether a client orders a single bulk density tester or twenty Melt Flow Indexers (MFIs), they receive the exact same meticulous treatment and rigorous quality control.

True to our commitment to excellence, our team rose to the challenge. By streamlining our production workflows and leveraging our expertise in polymer testing apparatus, we successfully manufactured, inspected, and dispatched the instrument to meet the client's strict mid-September arrival date.

A Commitment to Reliability

This successful delivery underscores Artemis Instruments' dedication to supporting our global clientele when it matters most. Whether supplying melt flow indexers, drop dart testers, or specialised bulk density apparatus, we pride ourselves on combining rapid delivery timeframes with uncompromising precision and detail.
